

# How to maximise your fleet's FTC rebate with EROAD's FTC solution

## Relying on estimates or assumptions are a key reason many businesses under-claim on FTC.

With EROAD's Fuel Tax Credit Solution, you could claim up to 2.5 times the rebate rate for off-road than on-road.

EROAD's FTC solution allows you to automatically measure and calculate FTC entitlements not only for fuel used on main roads, but also for off-road travel, idle and use of auxiliary equipment, all of which are entitled to the highest FTC rate.

### 16.0 cents per litre

Standard FTC rebate rate for heavy vehicles (>4.5t) travelling on public roads. Most claims for heavy vehicles are made at this rate.

### 41.8 cents

FTC rebate rate for eligible fuels for all types of vehicles (including light vehicles) used for business off-road or on private roads.

### \$25.8 per 100 litres

The difference, or additional monies, per 100 litres businesses could be claiming for vehicles using eligible fuels to carry out business activities off-road or on private roads.

### 4 years

The number of years you can retrospectively claim off-road and auxiliary fuel use if you can show a six-month pattern of consistent usage via telematics.
