

EROAD's telematics technology helps you proactively maintain your vehicles for a **safer, more productive fleet** by:

Providing **data and analytics** for a complete view of your fleet so you can better schedule repairs and maintenance.

Identifying **unsafe driving behaviors** (harsh braking, cornering or speeding) so it can be addressed quickly to reduce the long-term impact on your vehicles.

Providing **proof your fleet is safe and compliant** with key legislation.

Providing a **full audit trail of defects**, their resolution and who certified the repair.

Automating your **vehicle maintenance regime** by using real time, usage-based data to create predictive maintenance scheduling.

Making it easier to **stay on top of maintenance schedules** by tracking metrics like time lapsed, mileage, fuel use and engine hours.

Helping you **plan asset utilisation, budgets and staffing** more efficiently, preventing wastage.

Providing a **complete service history archive** for compliance.

Helping drivers **capture defects digitally** quickly and easily, pre and post-trip.

Monitoring **vehicle performance in real-time** to help reduce such things as idling and enhance fuel efficiency.

Generating reports which capture the **original inspection record**, along with its resolution and who actioned each item.
