

Leaderboard and Driver Insights improvements

You can now export and schedule the driver view of Leaderboard and Driver Insight reports in PDF and CSV format.

See how your drivers perform

We've introduced a driver-centric view of the Leaderboard allowing you to not only rank your vehicles but your drivers who use EROAD Driver ID units or the EROAD Electronic Logbook application on mobile devices.

Improved Fuel Efficiency Report

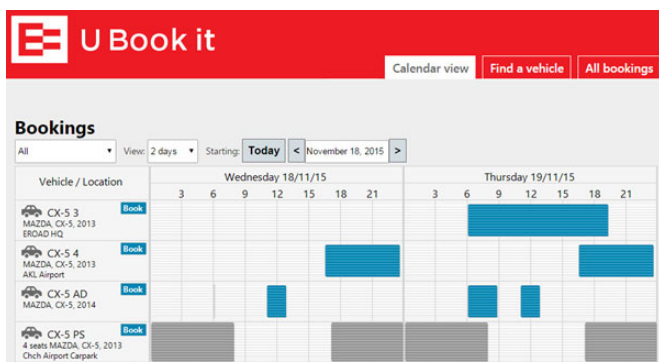

To help you stay on top of your fuel expenses, Make and Model benchmarks for the Fuel Efficiency Report have been updated with latest data retrieved from the EROAD client driving population.

Electronic Logbook: scheduling timesheet reports

You can now schedule Timesheet reports to be automatically delivered directly to your email inbox on a regular basis in CSV format.

U Book-It adds early release feature

This month we made some enhancements to our vehicle booking system, U Book-It. If a vehicle is returned early, it can now be automatically released back into the pool using customisable base return timeout settings. You can set 'Available hours' for a vehicle, so it can only be booked in office hours if required.

Introducing street numbers to map

Depot now displays street numbers in built-up areas supporting more accurate vehicle tracking and validation of proof of service.

Street numbers are available in maps, Daily Activity Report, Event Log and all areas in Depot that display street addresses.

Fuel Consumption Report retired

We have now retired our Fuel Consumption Report and recommend you use the Fuel Efficiency Report. It includes the same information – and then some! If you have the Fuel Consumption Report scheduled into your email inbox, you will still receive it until the end of the year.

Over Speed Dashboard exports

Our Over Speed Dashboard provides you with a complete view of your fleet's speeding behaviour in a visual, easy-to-understand way. Total and average number of speed events per distance travelled, trend over time, top speeding locations – all there is to know about speeding in just one report.

The report can now be scheduled and exported in PDF and CSV format so that insights can be delivered directly to your email inbox on a regular basis. And it's easy to print a copy with relevant information for drivers to take away.

Promote healthy competition

Our new Leaderboard provides you with an inside view of your fleet based on key driver metrics, enabling you to set up effective driver training and reward programmes.

Leaderboard ranks drivers against other drivers in your organisation. A star rating system compares individual drivers to all other drivers in the EROAD driving population. As their driving improves, so does their ranking and star rating.

Better data = better decisions

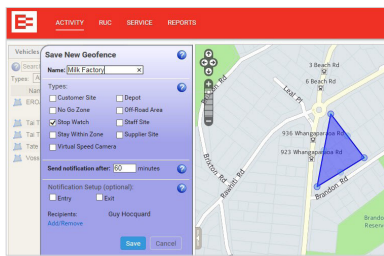

Driver Insight provides your drivers with a one-page summary of their driving performance, with actionable insights on focus areas. The report's colour coded graphs offer an at-a-glance view of areas for individual improvement, offering a great tool to help drivers and organisations track their performance over time.

DVIR email notifications

Depot now automatically generates a notification email when a driver submits a failed DVIR from the EROAD Driver app on their mobile device. Select suitable recipients for these emails so that action can be taken without delay.

Introducing stop watch geofence

Our new stop watch geofence enables monitoring of time-on-site targets by setting time limits for geofences. This could be your company depot, a customer site or any other location. If a vehicle enters the area and fails to exit within the set time limit, an automated email notification will be sent.

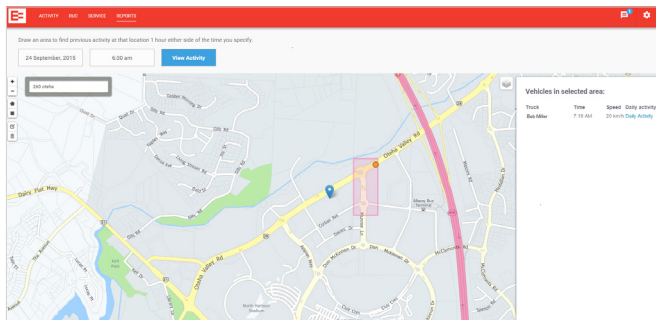

Upload fuel records from Excel files

Uploading a large number of fuel records from a single file is a quick and easy way to complete your fuel records in Depot. Now it's even easier because you don't have to worry about CSV files; you can upload your fuel records from a simple, straightforward Excel file. Date and time in one column or separated in two columns? That's up to you.

Introducing retrospective activity

Retrospective Activity enables you to quickly check in on past vehicle activity in any location. Simply choose a location and time and view your vehicles' activity. It just takes a minute and you don't have to take someone's word for it!

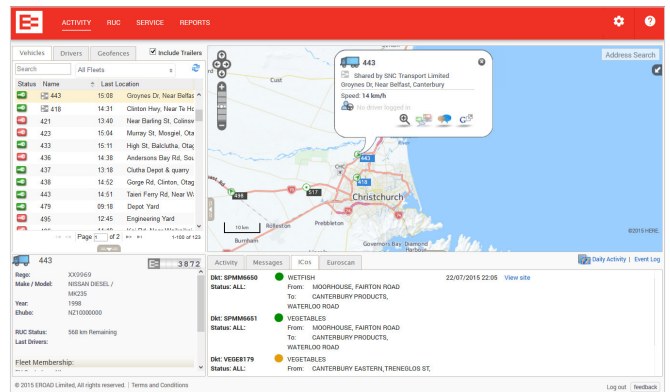

Maps add display traffic flow and terrain view

Our new, improved maps enable you to access relevant routing information on your maps. Flick from Map to Satellite to Terrain view and throw in up-to-date Traffic flow or information relevant for Trucks, and you've got all your bases covered.

EROAD Share extended with Partner Gateways

You can now monitor real-time Partner Gateway information with shared vehicles in Depot, and activate Partner Gateway sharing with just a few clicks.

Partner Gateways can integrate data feeds from third party systems into your Depot, allowing you to monitor reefer temperatures, job lists and other relevant data in real time, on one screen. These data feeds can be made available to partner organisations when sharing vehicles, along with information on current vehicle location and activity history. Simple yet powerful!

RUC confirmation adds vehicle registration information

We have included vehicle registration plate information on RUC purchase confirmation emails, allowing you to quickly identify vehicles with new RUC. You don't even have to open the email – the registration is in the subject line, as well as in the email body.

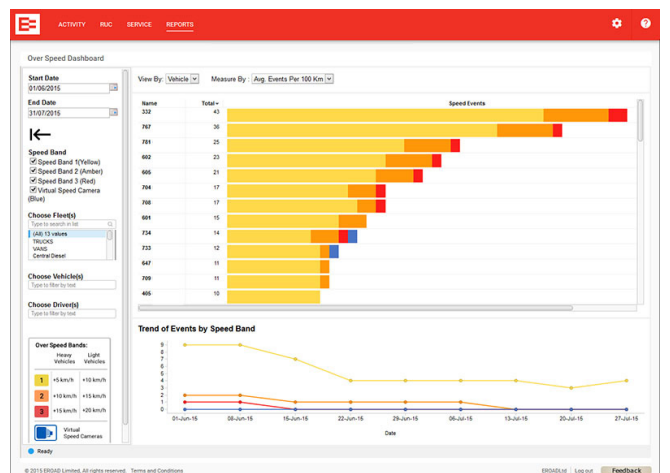

Improved credit card payments

We have modernised purchasing RUC by credit card making it easier in particular for mobile users. We hope you'll find the new, touch-friendly payment information screen easy to use with clear, descriptive messaging detailing payment information.

Still the same, just better.

Over Speed Dashboard helps turn insight into action

Our new Over Speed Dashboard ranks your drivers, vehicles or fleets based on their speeding behaviour. You can easily drill down and view speeding details and top speeding locations for each driver. Viewing the trend over time allows you to monitor the effectiveness of your measures.
