

How EROAD's telematics platform can monitor your fleet's efficiency and boost customer service levels:

EROAD can track:

- What time your vehicles left the depot
- When your vehicles arrived at specific sites
- How long your vehicles spent on-site
- How far each vehicle travelled
- When auxiliary equipment was used
- What jobs were completed
- Which driver was in each vehicle and for how long
- Fuel consumption
- Speed
- Driver behaviour

Your dispatchers can then make route adjustments based on:

- Changes in the traffic
- Vehicle availability
- Weather conditions

or switch resources around to ensure deliveries reach your customers when they need to. This helps:

- Keep clients informed of estimated arrival times
- Build and maintain trust and customer satisfaction along the way.

You can then analyse and use the data from completed jobs to make decisions that better serve your customers in the future.
