iCOS LiVE AND EROAD LAUNCH EHUBO INTEGRATED ONLINE VEHICLE AND TRANSPORT MANAGEMENT SYSTEM

Operating a transport business is a complex and demanding task, with drivers and managers required to cope with growing customer and regulatory requirements, in an environment of increasing competitive pressures. The ability to attract and retain customers is a key goal for all transport operators, who recognise that clients require high levels of service delivered for a reasonable price.

iCOS and EROAD have launched an Ehubo powered transport management system that provides an unprecedented combination of services to transport operators, with the best and most extensive set of business tools available.

With iCOS LiVE, operators get a cutting edge web-based transport management system that provides visibility of customer requirements and the tools to plan and manage client fulfilment while offering transparency and communication to their customer base. When integrated with EROAD's revolutionary web-based RUC management system, they have the complete package to deliver the best solutions to their customers, in the most cost-effective way.

iCOS LiVE Managing Director Kathy Ross says, "iCOS is constantly seeking a better understanding of our customer's needs and looking for ways to help them streamline and grow their businesses. iCOS LiVE uses the certified distance and location information recorded by the Ehubo against the consignments to provide total visibility. Operators require a self-funding Eruc system and iPhone/iPad/Android device for driver communication and signature capture and that's it. No data terminals or other expensive and inflexible installed hardware are required."

EROAD's Sales and Marketing Manager, Peter Batcheler says "EROAD actively seeks out commercial partnerships to deliver the best possible outcome for our clients. We are delighted to partner with iCOS, a recognised leader in the logistics and supply chain industry. iCOS LiVE promotes online solutions that automate processes, reduce errors, and facilitate faster delivery and pick up times."
