

BUSINESS EXCELLENCE WITH EROAD

We asked our customers how the EROAD solution had helped transform their businesses. This was Hat Creek Construction & Materials' response.

Hat Creek Construction & Materials is saving valuable management time with EROAD Electronic IFTA

Hat Creek Construction & Materials, Inc., based in Burney, California, provides heavy construction, commercial and residential construction, concrete and paving, portable rock crushing, culvert and pipe installation, equipment rental and trucking services. Its fleet of 35 heavy-duty trucks operates in several western states. The company also manufactures and supplies a wide a range of construction and landscape materials.

BUSINESS NEED

Operations at Hat Creek Construction & Materials include trucks that travel throughout California and to other western states hauling raw materials or construction equipment. The company is subject to filing IFTA (International Fuel Tax Agreement) and Oregon state fuel tax reports.

Relying on drivers to accurately record fuel purchases and state mileages was proving to be consistently problematic and led to a time consuming and error-prone process for preparing and filing IFTA quarterly fuel tax returns manually.

SOLUTION

In December 2016, Hat Creek Construction & Materials implemented EROAD Electronic IFTA and installed in-cab devices in trucks that traveled throughout California and to other states requiring the company to file IFTA and Oregon state fuel tax reports.

With EROAD's mileage information on the trucks is automatically captured and securely transmitted to its Depot secure web-based application, eliminating the need to review driver records and manually enter information. With EROAD mapping and geo-fencing capabilities, accurate exempt miles in each jurisdiction, including distance, location, and state line crossing information, is reported.

BENEFITS

With EROAD Electronic IFTA, Hat Creek Construction & Materials is streamlining fuel tax management. While previously the quarterly filing process took as much as two weeks, the EROAD solution has reduced that time to just ten minutes.

EROAD Electronic IFTA is eliminating the time-consuming need at Hat Creek Construction & Materials to recreate trips and is removing driver data entry requirements by automatically capturing and recording accurate mileage and fuel purchase information.

"EROAD streamlines and improves the accuracy of our IFTA filing. Before we adopted EROAD Electronic IFTA we prepared quarterly returns manually, and it could take two weeks to get all of the information and to recreate each trip. With EROAD it takes ten minutes. The solution also eliminates driver errors entering state mileages and fuel purchase data because that information is captured automatically."

ABOUT EROAD

Founded in 2000, EROAD is a global technology provider of operational, road use and fuel tax management and compliance solutions for the transportation industry. Headquartered in New Zealand with North American offices in Portland, Oregon, EROAD's advanced technology set the standard as the first GPS-based service provider to offer a government-approved electronic tax reporting solution in North America. This highly accurate and trusted technology is used to meet the compliance needs of fleets worldwide, including the 2017 FMCSA electronic logging device (ELD) mandate in the U.S. For more information, please visit www.eroad.com
